

## Who is Stormwater Victoria?

Stormwater Victoria is the peak body in Victoria representing organisations and individuals involved in the stormwater industry. Under the umbrella organisation of Stormwater Australia, we also collaborate with other states to share knowledge and promote best practice.

Our membership represents a field of diverse, knowledgeable and committed professionals who are passionate about the benefits that stormwater management can bring. Our members are typically from state and local government, public utilities, consultancies, universities and in product manufacturing.

## About us and our members

## What are the benefits of becoming a member of Stormwater Victoria?

- Access to regular networking and knowledge-sharing events to meet other practitioners in the industry and share the latest learnings and innovations
- Discounts on all our conferences, events and seminars
- Subscription to our quarterly national-based newsletter
- Access to the 'members only' area of our website which includes seminar and training information
- Representation and advocacy to government and business on key issues affecting the stormwater industry via the Stormwater Victoria committee
- Point of contact to request information and knowledge resources

To become a member of **Stormwater Victoria**, please complete the online application form at:

## Working with stormwater to create real value...

Stormwater is an important resource that needs to be properly managed to enhance outcomes for the community and the environment.

Everyday, practitioners in the stormwater industry work to enhance stormwater management, whether it is to benefit the environment or to provide better outcomes for the community. The benefits are vast and include:

- protecting and enhancing waterway values,
- supporting urban greening and healthy open spaces,
- providing an alternative water supply,
- reducing the risk of flooding, and
- improving amenity and access to natural systems.

Many disciplines contribute to make this possible – engineers, architects, scientists, urban planners, product manufacturers, construction specialists, researchers and educators all play a role. Stormwater Victoria provides a platform for collaboration and networking to advance stormwater management practices.
