

What is a Water Sensitive City?

Come to this free workshop to learn the benefits of applying water sensitive design, the range of sustainable water management techniques being used across the industry, and relevant policy and legislation.

Clearwater is a leading capacity building program, recognised for its role in providing the urban water industry with the knowledge, tools and skills to drive the transition to water sensitive cities.

Clearwater is funded by Melbourne Water with special project funding from DSE, EPA and MAV, and will be in Warrnambool for a free workshop on how to embrace integrated water systems and create liveable spaces where built and natural environments are in harmony and resilient to future change.

At the end of this session you will:

- Become familiar with the concepts required to design an effective stormwater harvesting project.
- You will learn about the latest research on stormwater pollutants.
- You will gain an understanding of how to plan for and apply technologies for stormwater collection, treatment and storage.
- Learn about innovative water harvesting projects underway in the South West.

Audience

Ideal for planners, engineers, draftspeople, architects, horticulturalists, builders and site supervisors.

This workshop is appropriate for those who plan and manage the urban built environment (streetscape, carpark and parkland elements) and are looking for ways to utilise stormwater and improve the quality of run off stormwater and create a water sensitive City.

When

4.00 – 6.00pm June 5th 2012

Where

Proudfoots on the River

Inclusions

Followed by drinks and light supper.

RSVP

Friday 1st June 2012
