

# The Value of Green Infrastructure

A Guide to Recognizing Its Economic, Environmental and Social Benefits

# Table of Contents

|  |           |  |  |
|--|-----------|--|--|
| <b>ACKNOWLEDGMENTS</b>                             |           |  |  |
| <b>INTRODUCTION</b>                                | <b>1</b>  |  |  |
| <b>GREEN INFRASTRUCTURE BENEFITS AND PRACTICES</b> | <b>3</b>  |  |  |
| <b>ECONOMIC VALUATION IN ACTION</b>                | <b>14</b> |  |  |
| <b>Economic Valuation Methods and Tools</b>        | <b>14</b> |  |  |
| <b>Our Framework</b>                               | <b>15</b> |  |  |
| <b>Benefit Measurement and Valuation</b>           | <b>17</b> |  |  |
| 1. Water   | 17        |  |  |
| STEP 1: Quantification of Benefit:                 |           |  |  |
| Reduced Stormwater Runoff                          | 17        |  |  |
| STEP 2: Valuation of Quantified Benefits:          |           |  |  |
| Reduced Stormwater Runoff                          | 20        |  |  |
| 2. Energy  | 26        |  |  |
| STEP 1: Quantification of Benefit:                 |           |  |  |
| Reduced Energy Use                                 | 26        |  |  |
| STEP 2: Valuation of Quantified Benefits:          |           |  |  |
| Reduced Energy Use                                 | 32        |  |  |
| 3. Air Quality                                     | 33        |  |  |
| STEP 1: Quantification of Benefit:                 |           |  |  |
| Reduced Criteria Pollutants                        | 33        |  |  |
| STEP 2: Valuation of Quantified Benefits:          |           |  |  |
| Reduced Criteria Pollutants                        | 37        |  |  |
| 4. Climate Change                                  | 39        |  |  |
| STEP 1: Quantification of Benefit:                 |           |  |  |
| Reduced Atmospheric CO2                            | 39        |  |  |
| STEP 2: Valuation of Quantified Benefits:          |           |  |  |
| Reduced Atmospheric CO2                            | 45        |  |  |
| 5. Urban Heat Island                               | 47        |  |  |
| 6. Community Livability                            | 48        |  |  |
| Aesthetics   | 48        |  |  |
| Recreation   | 49        |  |  |
| Reduced Noise Pollution                            | 49        |  |  |
| Community Cohesion                                 | 50        |  |  |
| 7. Habitat Improvement                             | 51        |  |  |
| 8. Public Education                                | 51        |  |  |
| <b>Example Demonstration 1:</b>                    |           |  |  |
| <b>Benefit Assessment of a Single Roof</b>         | <b>52</b> |  |  |
| <b>Example Demonstration 2:</b>                    |           |  |  |
| <b>Benefit Assessment of a Neighborhood Scale</b>  | <b>53</b> |  |  |
| <b>CONSIDERATIONS &amp; LIMITATIONS</b>            | <b>55</b> |  |  |
| <b>CASE STUDIES: VALUING GREEN</b>                 |           |  |  |
| <b>INFRASTRUCTURE ACROSS THE UNITED STATES</b>     | <b>59</b> |  |  |
| <b>CONCLUSION</b>                                  | <b>63</b> |  |  |
| <b>APPENDIX A</b>                                  | <b>64</b> |  |  |

# Acknowledgements

This guide owes thanks to a variety of people and organizations that were instrumental in its development. First among those is The Center for Neighborhood Technology's (CNT) project team, led by Joe Grant and Danielle Gallet, along with Stephanie Morse, Steve Wise, Cece Yu, Kathrine Nichols, Kalle Butler Waterhouse and Marie Donahue.

Initial funding for research into the type of benefits Green Infrastructure produces came from the U.S. Environmental Protection Agency's (EPA) Office of Water and Watersheds, with project management through Tetra Tech, following a January 2008 EPA workshop on research issues. Funding and review by American Rivers, specifically William Hewes and Betsy Otto, was essential to the completion of this handbook and its sections on valuation of particular benefit types. American Rivers' support for the project was made possible by the Kresge Foundation. The Peggy Notebaert Nature Museum donated space for a 2010 workshop to review initial concepts and the path to benefit valuation.

The following advisors shared their time and expertise in a variety of different ways including reviewing initial concepts and guidebook drafts, contributing to particular practice and benefit sections, and presenting at the 2010 workshop. Those include Dr. John Braden of the University of Illinois, Chris Kloss of the Low Impact Development Center, Ed MacMullen of EcoNorthwest, Dr. Franco Montalto of Drexel University, Dan Nees of Forest Trends, David Nowak of the U.S. Forest Service, Steven Peck of Green Roofs for Healthy Cities, Dr. Sabina Shaikh of the University of Chicago, Robert Goo of the U.S. EPA, Mike Alonso of Casey Trees and Jen McGraw of CNT.

This work also extends initial research in support of CNT's Green Values Calculator® ([greenvalues.cnt.org](http://greenvalues.cnt.org)), which identified additional values related to green infrastructure practices. Under funding from the Joyce Foundation, CNT's Bill Eyring, Julia Kennedy and Daniel Hollander documented a range of benefits that were the starting points for the research of this guide.
